

**AMENDMENTS TO THE SPECIFICATION**

At page 46, please amend the paragraph beginning on line 21 as follows:

Examples of viral antigens useful in the subject compositions and methods using the compositions include, but are not limited to, HIV antigens. Such antigens include, but are not limited to, those antigens derived from HIV envelope glycoproteins including, but not limited to, gp160, gp120 and gp41. Numerous sequences for HIV genes and antigens are known. For example, the Los Alamos National Laboratory HIV Sequence Database collects, curates and annotates HIV nucleotide and amino acid sequences. This database is accessible via the internet, at <http://hiv-web.lanl.gov>[[/]], and in a yearly publication, see Human Retroviruses and AIDS Compendium (for example, 2000 edition).
